Zero Carbon Britain

Rethinking our future – in our community

According to a report by the Centre for Alternative Technology, Britain could reduce its climate changing carbon emissions to **Zero**, using current technology, with a modern standard of living, eating well, and meeting our energy demand with 100% renewable UK energy sources.

Join us and find out how we can become Zero Carbon Britain with two of the report's authors.

Followed by a Panel drawn from the local community who will give their perspectives on what this means to us in Hanover. Discussion will be chaired by the former Head of Sustainability at the Council – Thurstan Crockett.

**Friday, 27 February
7.30–9.00pm at the
Hanover Centre
(Upper Hall)**
